Schedule	Condition	Expected Operation
- No EMCC		
Warm	Oil temperature at start-up above 2° C (36° F) and below 27° C (80° F)	- Normal operation (upshift, kick-downs, and coastdowns)
- No EMCC		
Hot	Oil temperature at start-up above 27° C (80° F)	- Normal operation (upshift, kick-downs, and coastdowns)
- Full EMCC, no PEMCC except to engage FEMCC (except at closed throttle at speeds above 70-83 mph)		
Overheat	Oil temperature above 115° C (240° F) or engine coolant temperature above 118° C (244° F)	- Delayed 2-3 upshift (25-32 mph) - Delayed 3-4 upshift (41-48 mph) - 3rd gear FEMCC from 30-48 mph - 3rd gear PEMCC from 27-31 mph
Super Overheat	Oil temperature above 127° C (260° F)	- All “Overheat” shift schedule features apply - 2nd gear PEMCC above 22 mph - Above 22 mph the torque converter will not unlock unless the throttle is closed or if a wide open throttle 2nd PEMCC to 1 kickdown is made

STANDARD PROCEDURE - TCM QUICK LEARN

The quick learn procedure requires the use of the scan tool.

This program allows the electronic transmission system to recalibrate itself. This will provide the proper transmission operation. The quick learn procedure should be performed if any of the following procedures are performed:

- Transmission Assembly Replacement
- Transmission Control Module Replacement
- Solenoid Pack Replacement
- Clutch Plate and/or Seal Replacement
- Valve Body Replacement or Recondition

To perform the Quick Learn Procedure, the following conditions must be met:

- The brakes must be applied
- The engine speed must be above 500 rpm
- The throttle angle (TPS) must be less than 3 degrees
- The shift lever position must stay in PARK until prompted to shift to overdrive
- The shift lever position must stay in overdrive after the Shift to Overdrive prompt until the scan tool indicates the procedure is complete.
- The calculated oil temperature must be above 60° and below 200°
